

HIGH PRESSURE PLUNGER PUMP SERIES

High Pressure SPECIFICATIONS

Pump Size	2x8
Flow Rate	Up to 58 Litres/minute
Pressure	138 Bars (2000 PSI)
Power Options	Air Driven Requires 185 CFM (100PSI)

The ChemGrout High Pressure Pump series are skid mounted grout pumps. These low maintenance pumps are designed to work with your grouting batch plant or mixing system. The grout pump is a double acting, positive displacement, plunger style pump. The plunger pump is designed so that conversion between the pressure outputs is quick, easy and cost effective.

The pump has patented fasteners that dramatically reduce disassembly time for cleaning and maintenance. The pump is available with a 2" ID ribbed suction hose or a 21 gallon holding hopper that is connected directly to the plunger pump. Operator controls are centrally located for efficient production.
